Greetings... Welcome to our new Live Chat QR Physical Marketing platform! This is going to change your marketing from today on!

Using your standard 11.5x6 postcard, you provide a mailing list to us. Our system generates a unique QR code for each name and address on your list and prints in onto your postcard.

When the recipient scans that unique QR code they get their instant home value! No multiple landing pages, no work on their part, like having to type in their name or address. The client does not have to provide any information, which is the number one reason people fail to follow thru with anything, because of personal information. It just takes them to a simple page that shows their current home value, Your name (the agent) and your information. It also shows additional home details. Our Live Chat QR codes do not expire!

Also in real time, when they scan our Live Chat QR code, you get an instant email alert telling you who scanned so you can pinpoint your marketing!

We are also very pleased to offer you a beta version of our app that will work on your IOS Apple phone (Android coming soon) that provides a real time interface with instant push messages when any of your recipients scan their unique QR code. Once a scan occurs by the recipient you will have the option to instantly live chat with them on the page they are looking at!

Full reports are available on our website on your dashboard of each campaign and scan thru, along with other information such as date, time, browser, location (city & state) they scanned from, IP addresses and how many times they scanned (continues to count over long term) will be available to you at any time, so you can pinpoint further marketing to those that are scanning thru. Our future release of the app will also provide this information and interface to your account.

This system will eventually have many other options, like live Visual Market Update mapping, directly on a mailer that'll show all the sold homes (comps) around a persons address with sold prices in a satellite full color image.

Our app will not only give instant push messages when scanned and the option to live chat, but (coming soon) full access to all your information plus options to search other real estate data! It's the only system in the US like this!

Full demos are available!!
